

Improve the Safety &
Productivity of your Most
Valuable Assets — your people!

The TeMeDa Beacon extends the power of TeMeDa to your staff by allowing you to track individuals within your TeMeDa.com account with the use of a smartphone as a GPS/telematics device.

Customers who use the tracking and management capabilities of TeMeDa for their vehicles and equipment can now leverage those same features for employees who carry a smartphone. You can create assets for each Beacon enabled phone and follow those assets moving in real-time on the map.

» Safety First

Know where your mobile crews are working and which assets are in operation across multiple locations at all times. Insure that your most valuable asset, your employees, are operating safely while enabling you to coach and improve their practices to insure a safe work site.

» Privacy is Key

Your staff controls when Beacon is active and in tracking mode. When your staff is Off Duty, Beacon is Off Duty as well no longer displaying their location in the map.

» The Beacon App

The Beacon App is available from your App Store. Simply download the App onto your smartphone, enroll the phone into your TeMeDa account and it will automatically appear in TeMeDa.com. Report location, create geofences, monitor speed, follow bread crumb trails, and set alerts for your staff.

» TeMeDa App

The TeMeDa App offers much more than simple tracking. With the TeMeDa App you can plan, manage and track equipment maintenance, measure actual job costs, determine asset and operator productivity, reduce fuel usage, idle time, and determine asset utilization.

» Single Integrated View of All Your Assets

The TeMeDa App allows you to track and capture valuable data from all of your remote assets, equipment and people. With one login, TeMeDa provides a single unified view of all of your assets: remote workers, assets both powered and unpowered, on-road & off-road.
