

Anywhere on Earth, Temedas can help you to keep track of your valuable assets

Your assets are never out of coverage with satellite enabled communications from Temeda. Temeda has integrated state of the art satellite enabled hardware into its comprehensive asset monitoring portfolio.

Designed to operate in the most rugged of environments.

Companies today require visibility into their assets all over the world. Because all job sites are not covered by cellular services Temeda brings you hardware with satellite connectivity. Temeda satellite services allow you to locate your assets, monitor their performance, track engine hours, and create alerts from input sensors such as fluid level and door open.

SmartOne C

The SmartONE C can be line powered or automatically switch to battery power. Small and easy to install with the ability to accept input signals such as engine on, this asset tracking device is designed to keep track of assets in places where cell coverage is not available.

SmartOne Solar

The SmartOne Solar represents the state of the art in satellite trackers that require long life in applications that require the highest of safety certifications. With solar power battery recharge, the SmartOne Solar can provide 10 Years of usable service. With two inputs and integrated Bluetooth it is ideal for applications such as Oil & Gas and Marine.
